

GEO Content Engine

A Schneider Electric project

Executive summary

One investment turns Distributor IQ from a diagnostic into an engine that closes the gap

01

The shift

Buyers start research in ChatGPT, Gemini and Perplexity, and act on the answer. If a distributor is not named, it is absent at the moment of decision.

02

The gap

Distributor IQ shows where distributors are missing and suggests actions. Producing the content that fixes it is still manual, slow and generic.

03

The solution

A GEO content engine: Distributor IQ gaps in, KB-grounded content tailored per distributor page out. Scored, human-approved, then re-measured.

04

The ask

Fund V2 (gap-to-content) on top of the Electrifier POC. Pilot on Breakers and Contactors with a small group of distributors, then decide on scale.

General

Buyers now ask AI first, and act on the answer

AI answers are assembled from many sub-searches, so visibility is won by topic coverage, not one keyword

12–15 sub-queries

Google AI Mode generates per question on average. Each one is a chance to be cited, or missed.

~27% stable

Share of fan-out sub-queries that stay the same across repeated runs. Optimise for topics, not phrases.

+161% citation rate

For content restructured around fan-out sub-intents vs. single-intent pages (study of 173,000+ URLs).

So what for distributors Product-category pages must answer the full set of buyer sub-questions with structured, citable evidence. That is a content problem, and it repeats for every category and every distributor.

General

Distributor IQ shows the gap. Closing it is still manual

Today the tool diagnoses and recommends; the content that acts on the recommendation is left to the distributor

IN DISTRIBUTOR IQ

Visibility
Where the distributor is named in AI answers

Suggested actions
Evidence-backed recommendations

→

IN DISTRIBUTOR IQ

Action plan
Track each action to completion

→

MISSING

Content execution
Write the page that wins the answer

1 No GEO expertise on the distributor side

Suggested actions say what to fix, not how to write it. Most distributor teams have no GEO playbook.

2 Generic content is not product-true

Copy written without Schneider product knowledge risks wrong specs, weak claims and no citable evidence.

3 No fast proof that a fix worked

Without a loop back to the citation tracker, nobody knows which content actually moved visibility.

General

Three versions, each one de-risking the next

V1 proves the scoring; V2 connects it to Distributor IQ and the business KB; V3 adds media and learning

V1 Pilot

GEO content pipeline

POC · Electrifier

- Score source content against a versioned GEO rubric
- Generate variations until they reach the 95% bar
- Human review and QA before output
- Scope: Motor Management content

Status: in build

V2 Scale

Gap-to-content with Distributor IQ

Investment ask

- Distributor IQ gaps and suggested actions as input
- Category-level content readiness audit
- KB-grounded drafting, tailored per distributor page
- Completed work flows back into the action plan

Indicative: Q4 2026 – Q1 2027

V3 Closed loop

Multimodal and self-improving

Next

- Spec-safe images; video on demand
- Mandatory human visual QA
- Citation outcomes recalibrate the rubric
- Run history to compare versions over time

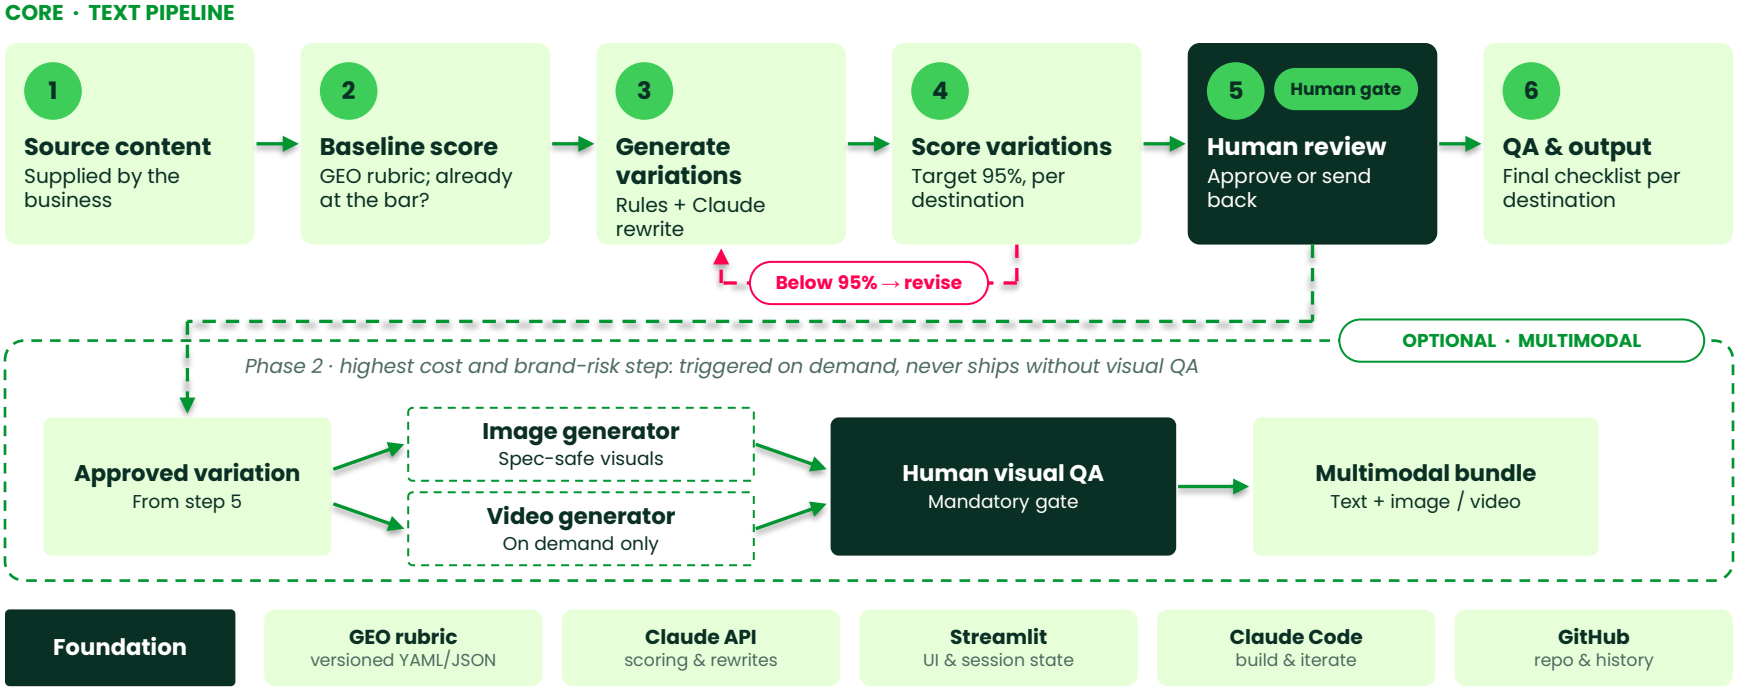

Indicative: from Q2 2027

Why Distributor IQ is part of the architecture

It tells us what to write and why, and then proves whether it worked

WHAT & WHY

Distributor IQ

- 187 tracked buyer questions, by category and intent tier
- 8 content opportunities, each with answers missed and the competitor cited instead
- Page health: 9 on-page components checked per page
- Technical blockers: JS-only rendering, missing Product / FAQ schema

HOW

GEO content engine

- Turns each opportunity into a content brief
- Grounds every claim in the business knowledge base
- Drafts, scores and revises to the 95% bar
- Packages server-rendered HTML, Product / FAQ schema and meta

PROOF

Distributor IQ

- Action plan status updated per item
- Weekly AI-visibility runs re-measure the page
- Citation tracker shows citations gained or lost
- Outcomes recalibrate the rubric in V3

Without Distributor IQ the engine optimises pages nobody asked for. **Without the engine** Distributor IQ actions stall at “the how is yours to choose”.

Category readiness audit: Breakers and Contactors

Six dimensions per category, each from a clear signal; statuses are illustrative until a live run

Dimension	Breakers	Contactors
Prompt & fan-out coverage Signal: Distributor IQ prompts	Partial	Gap
Spec accuracy & structure Signal: Business KB	Strong	Partial
Selection & comparison Signal: Competitor view	Gap	Gap
FAQ & how-to depth Signal: Page health crawl	Partial	Gap
Citation health Signal: Citation tracker	Partial	Partial
Freshness & consistency Signal: Business KB	Strong	Partial

Priority = gap severity × prompt volume × distributor relevance

Breakers · top suggested content

- Application-based selection guide (residential, commercial, industrial)
- Trip-curve and breaking-capacity comparison table
- FAQ for fan-out prompts, e.g. “which breaker for an EV charger?”

Contactors · top suggested content

- Sizing guide: motor power to utilisation-category rating
- Coil voltage and accessory compatibility FAQ
- Cross-reference page vs. common alternative ranges

General

One knowledge base, tailored for every distributor

Facts come only from the KB; tailoring changes emphasis, structure and local offer, never the specs

BUSINESS KNOWLEDGE BASE

Distributor IQ signals
Gaps, prompts, competitors, citations

Distributor profile
Segments, region, stock and services, tone

Category playbooks
Selection logic, use cases, approved claims

Schneider product truth
Specs, standards, datasheets, master data

SAME PRODUCT, TWO DISTRIBUTOR PAGES

Product: miniature circuit breaker range

Distributor A

Industrial & panel builders

- Breaking capacity and selectivity tables
- DIN-rail accessories and auxiliaries
- Bulk availability, project quotes

Distributor B

Residential installers

- Which rating for which circuit
- Combining with RCD protection
- Install tips, same-day pickup

Prerequisites to build it with Claude Code

Four groups to line up before the V2 build starts

01

Distributor IQ

Ask: Sozo / SE admin

- SE Team or Admin login with real sign-in, scoped to the pilot distributors
- CSV exports now; a read API (JSON) as the target
- Provider keys set, so data is live, not demo
- Action-plan write-back via API, or a manual step

02

Claude Code build

Ask: DTC / IT

- Claude Code seat and an approved Claude API key with a spend cap
- GitHub repo in the SE organisation
- Python 3.11+ and Streamlit; secrets kept out of the repo
- Approved hosting: Streamlit Cloud or an internal server

03

Knowledge & content

Ask: Business

- Product truth for pilot ranges: datasheets, specs, standards
- Category playbooks and an approved-claims list
- FAQ template and brand / tone guide
- A labelled set of good and bad pages to calibrate the rubric

04

Governance & people

Ask: DTC / legal / distributor

- A named business reviewer per category
- Legal sign-off on sending content to the LLM API
- Pilot distributor agreement to publish
- A CMS route that serves HTML + JSON-LD, not JS-only pages

General

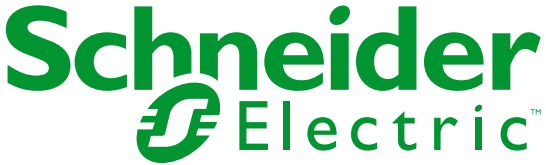

Governance and top risks

Ranked by impact; the rubric's missing ground truth is the risk the rest follow from

RISK	LIKELIHOOD	IMPACT	MITIGATION
Rubric has no ground truth	High	High	Calibrate on labelled good/bad examples; in V3 use citation outcomes
Wrong or unsupported product claims	Med	High	Generate only from KB facts; show sources to the reviewer; human sign-off
Sensitive or pre-release content	Med	High	Confirm hosting and API terms with DTC/legal before build
Scope creep to multimodal	High	Med	Keep media in V3; ship V2 text first
API cost at scale	Low	Med	Cap variations per run; track cost per page from day one
Stakeholder expectation drift	Med	Med	Frame demos as "rubric v1, validated on N examples"
